Project Name	Streamlining Ticket Assignment for Efficient Support Operations
Maximum Marks	4 Marks

PHASE 1 – EMPATHIZE & DISCOVER

Objective

Understand user challenges in ticket handling and identify gaps in the current assignment process within ServiceNow.

Empathize (Understanding Users)

Key Users:

- IT Support Agents
- Service Desk Team
- End Users (employees/customers)

Pain Points Identified:

- **Tickets are assigned manually → causes delays**
- **Wrong assignment groups → leads to re-routing**
- **Lack of clarity in ticket priority**
- **Increased workload on certain teams**

User Needs:

- **Faster ticket routing**
- **Accurate assignment**

- **Reduced manual effort**
- **Clear prioritization**

Discover (Current Process Analysis)

Existing Workflow:

- 1. User creates ticket**
- 2. Ticket goes to service desk**
- 3. Agent manually assigns ticket**
- 4. Ticket may be reassigned multiple times**

Issues Found:

- **Time-consuming manual process**
- **High risk of human error**
- **SLA breaches due to delays**

Define the Problem Statement

“The current ticket assignment process is manual, slow, and error-prone, leading to delayed resolutions and poor SLA performance. There is a need to automate ticket routing based on predefined conditions to improve efficiency and accuracy.”

Brainstorm Ideas

Possible Solutions:

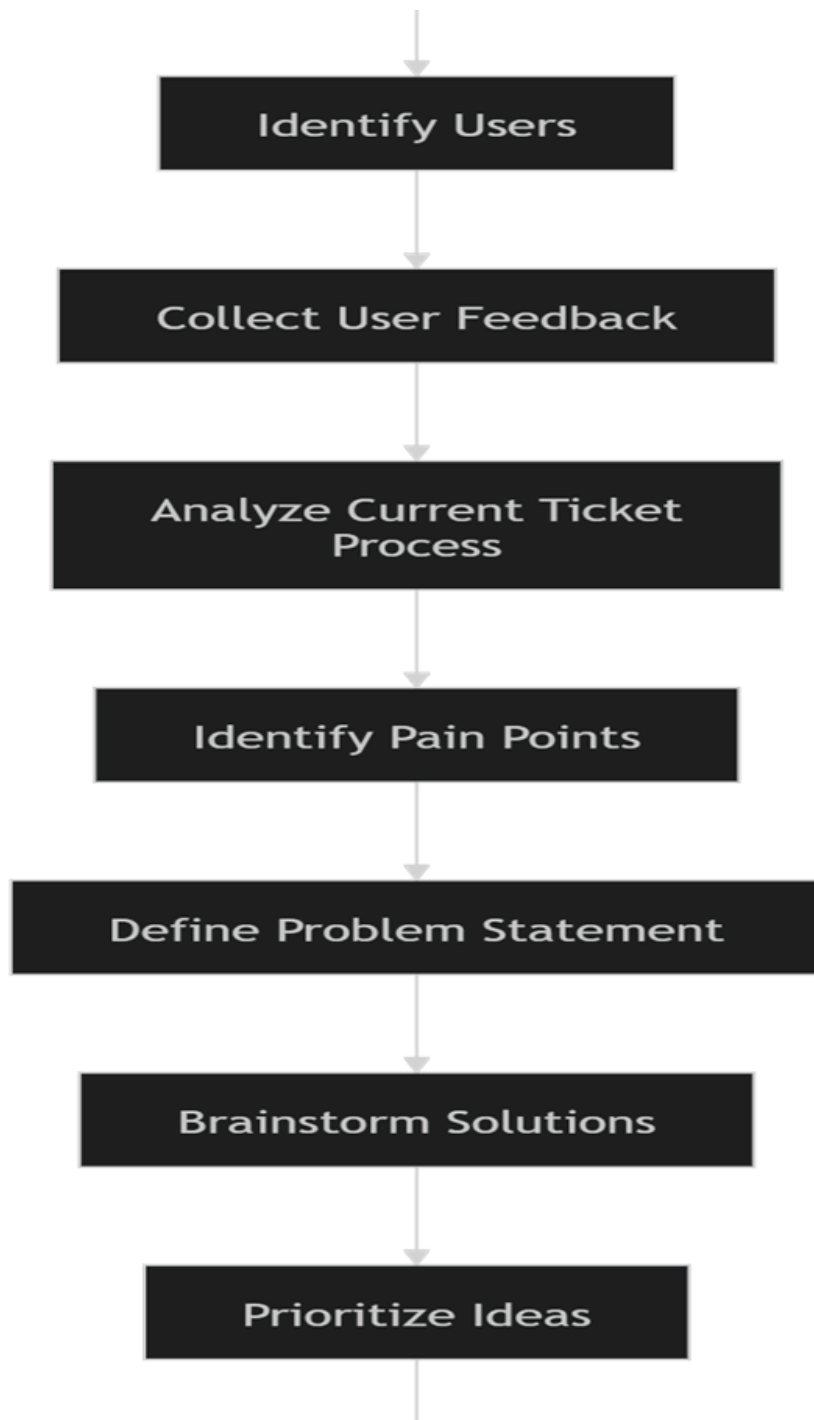

- **Use Assignment Rules for automatic routing**
- **Implement Data Lookup Rules for field auto-population**
- **Use Flow Designer for advanced automation**
- **Categorize tickets properly at creation**
- **Add priority-based assignment logic**

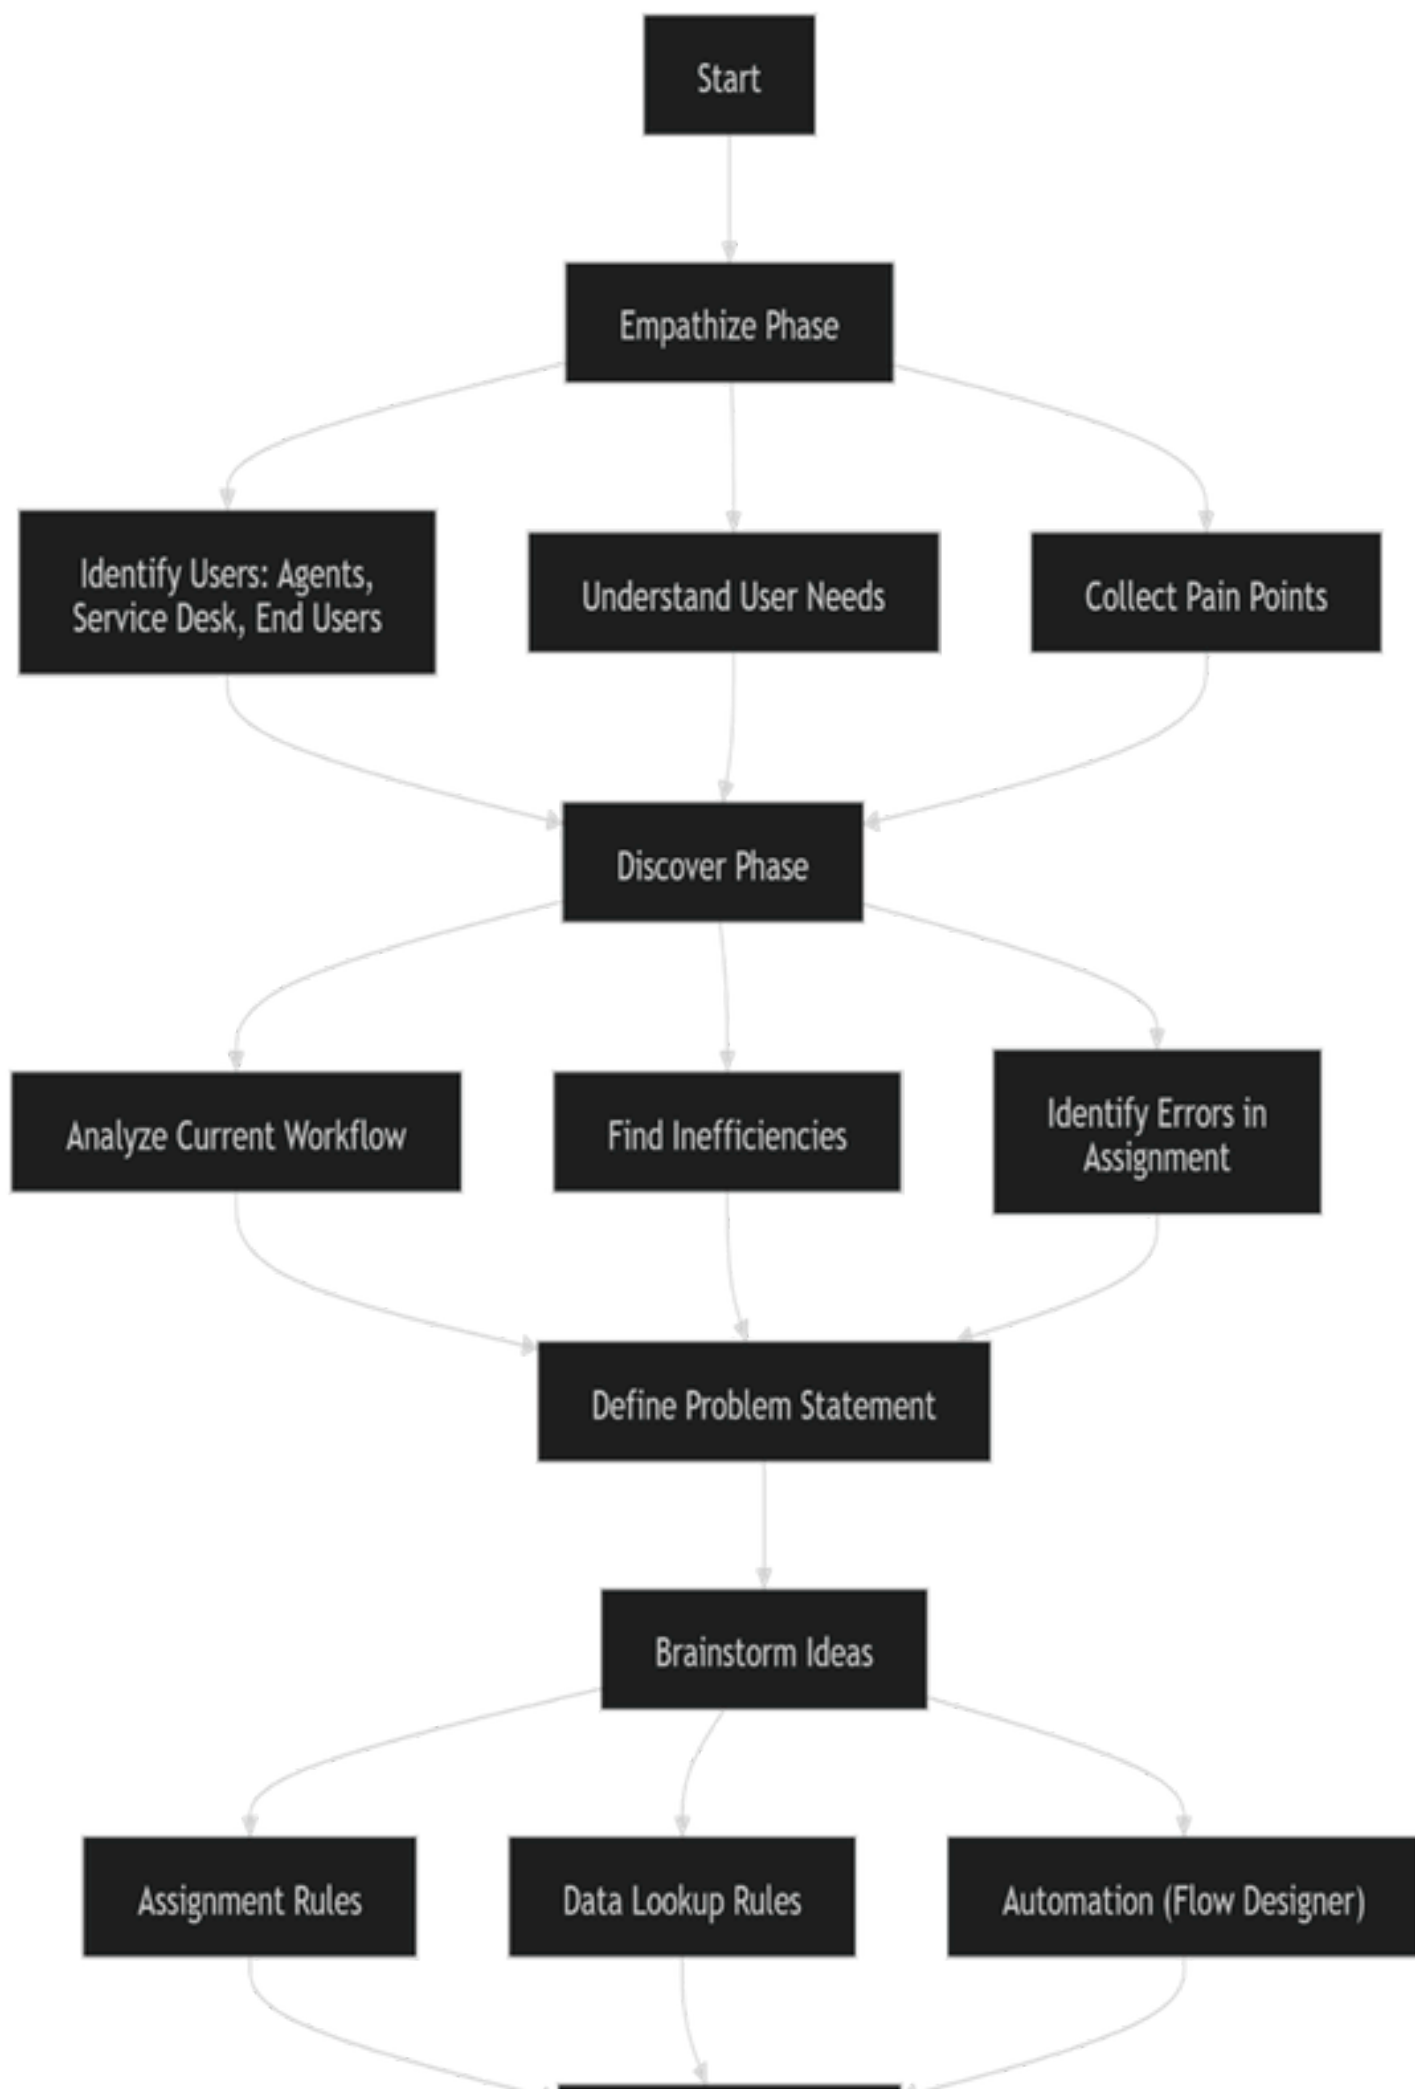

Phase 1 Outcome

- **Clear understanding of user pain points**
- **Defined problem statement**
- **Shortlisted automation solutions**
- **Ready to move into solution design**

In this phase, the focus is on understanding the challenges faced by users in the ticket assignment process within ServiceNow. By analyzing the current workflow, it becomes clear that manual ticket assignment often leads to delays, incorrect routing, and increased workload for support teams. IT support agents and service desk teams frequently struggle with prioritizing tickets and ensuring they reach the appropriate assignment groups on time.

Through observation and analysis, several pain points were identified, including inefficient manual processes, high chances of human error, and frequent reassignment of tickets. These issues not only slow down resolution times but also negatively impact service level agreements (SLAs) and overall user satisfaction.

Brainstorm & Idea Prioritization Template

Based on these findings, the problem can be defined as the lack of an automated and intelligent ticket assignment system. The existing approach is time-consuming and inconsistent, creating a need for a streamlined solution that improves accuracy and efficiency.

To address this, multiple ideas were brainstormed, such as implementing assignment rules for automatic routing, using data lookup rules to standardize field values, and leveraging automation tools to minimize manual intervention. These ideas were then prioritized based on their impact and feasibility, ensuring that the most effective solutions are considered for the next phase of development.

THANK YOU...
